DIABETES

EXPANDING THE KNOWLEDGE OF TYPES 1 AND 2 DIABETES REVEALS NEW DRUG TARGETS.

Do you, or does someone you know, have diabetes? Then you're probably aware that it's hard work to get—and keep—diabetes under control. In addition, you know how important it is to get a handle on it to avoid a host of dangerous health complications.

Improved ways to prevent and treat diabetes would benefit the more than 400 million people worldwide living with the disease. Join us to learn about recent discoveries in Type 1 and Type 2 diabetes research, direct from our leading researchers. They will discuss how their collaboration opened up an entirely new approach to effectively manage diabetes, and how biomarkers may lead to early detection and stave off this chronic condition. Hear about breakthroughs—including how our scientists are identifying novel drug targets to treat diabetes.
